                                                                                                                                                                                                                                                                                                                                                                                                          mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are useful for treating diabetes. Also, peptides that are useful for treating diabetes. Also, peptides that are useful for treating agrowth factor (IGF-1) receptor are useful for treating insulin-like growth factor (IGF)-sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful therapeutics and research reagents. AAU88034-AAU90957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid access.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytostatic; antidiabetic; neuroprotective; cerebroprotective; ophthalmological; insulin; receptor; gene therapy; diabetes; insulin-like growth factor-1; IGF-1; tumour; prostate; breast; insulin-tite growth; neurological diseases; stroke;

This sequence represents a monoclonal anti-hepatitis B antigen binder consequence from the R26 library which may be used in the conjugate of the convention. The novel labelled conjugate comprises at least one label catached to a functional surrogate comprises at least one label catached to a functional surrogate of an analyte of interest. The conjugate is capable of competing effectively with the analyte for a cativity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have can immunoreactive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays cap you provide a surrogate and receptor.

CC They can be labelled for use in standard competitive affinity assays cap polypoptides, polysaccharides, polynucleotides, glycoproteins and conjugates are able to minic naturally occurring analytes. Typical constaining macromolecules, polynucleotides, glycoproteins and conjugates and conjugates are able to minic naturally occurring analytes.

CC as polypoptides, polysaccharides, polynucleotides, glycoproteins and conjugates and conjugates and conjugates are altered to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle stimulating hormone, human placental conjugates and conjugates and conjugates and conjugates and conjugates are useful for detecting ferritin, follicle stimulating hormone, human placental conjugates and conjugates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prolactin; parathyroid hormone; placental lactogen; hepatitis antigen antibody; chorionic gonadotropin; luteinising hormone; cytomegaloviru Streptococcus; rubella; toxoplasma; DK-MB; prostate-specific antigen; carcinoembryonic antigen; alpha-fetoprotein; herpes virus; CA125.
                                                 Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and CA125 (a tumour marker).

              Clostridium perfringens food poisoning.
                                                                                                                                                                                                                                                                                                                                                                         of the blood coagulation cascade. The anticoagulant activity is not inhibited by serine protease inhibitors such as PMFS or DFP. The molecular weight of Draculin ranges from 75-90 kD and may be used in treatment of acute myocardial infarction, deep vein thrombosis, pulmonary embolism, unstable angina, transient ischemic attacks, peripheral vascular or bypass occlusions and disseminated intravascular coagluation. These peptide fragments were derived from Draculin by cleavage with chymotrypsin and overlapping peptide fragments were compared to determine the complete amino acid sequence of Draculin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences given in AAR71038-84 represent peptide fragments derived from the anticoagulant protein, Draculin. Draculin is isolated from the saliva of vampire batts and is distinct from other known anticoagulants in that it inhibits both factors IX and X of the blood coagulation cascade. The anticoagulant activity is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New anticoagulant protein, draculin, from vampi and related nucleic acid, vectors, transformed for treating myocardial infarction, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anticoagulant; Draculin; saliva; vampire bat; inhibition; factor IX; factor X; blood coagulation cascade; serine protease inhibitor; PMFS; acute myocardial infarction; deep vein thrombosis; pulmonary embolism; unstable angina; transient ischemic attack; peripheral vascular; DFP; bypass occlusion; disseminated intravascular coagluation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence corresponds to a carboxy-terminal protein fragment (amino acid residues 290-319) of the Clostridium perfringens type A enterotoxin protein. Plasmids containing E. coli expression vectors and Clostridium perfringens type A enterotoxin gene fragment encoding amino acid residues 171-319 or 290-319 can be used to produce clostridium perfringens type A enterotoxin toxoids. A synthetic peptide corresponding to these residues 290-319 can also be prepared to be used as a toxoid. These toxoids irreversibly bind to and saturate receptor sites on intestinal membranes, thus effectively competing for these receptor sites with Clostridium perfringens type A enterotoxin. The synthetic peptide and the recombinant carboxy-terminal fragment, are useful as toxoids in a vaccine for preventing C. perfringens food poisoning, or in a composition to treat such food poisoning.

The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of D3 peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues Leu331-Tyr338, where native cysteine residues may be replaced by alanine residues. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain

CC and with the analyte for a limiting amount of its affinity receptor. CC Functional surrogates are able to mimic naturally occurring analytes. CC Functional surrogates are able to mimic naturally occurring analytes. CC Functional surrogates are able to mimic naturally occurring analytes. CC (sep. homogenous immunoassays) for detecting large macromolecules such cas polypeptides, polysaccharides, polynucleotides, glycoproteins and CC lipid-containing macromolecules, as well as small haptens. Typical cdiagnostic analytes for detection include cardiac or tumour markers, CC diagnostic analytes for detection include cardiac or tumour markers (CC allergens, hormones related to fertility-pregnancy or analytes associated CC with infectious disease. In particular, the assays are useful for CC tummunoglobulin E, prolactin, parathyroid hormone, human growth hormone, CC immunoglobulin E, prolactin, parathyroid hormone, human growth hormone, CC chorionic gonadotropin, human luteinising hormone, cytomegalovirus, CC chamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, CC myoglobin, myosin light chain, troponin, carcinoembryonic antigen, antigen, prostate-specific antigen and CA125 (a tumour marker).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | length:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                  Score
